Troubleshooting

Issue: Indicator light does not turn on when the "BATTERY TEST" button is pushed:

1. Check that the batteries are fresh and installed in the correct direction (indicated on the battery holder).

2. Check to make sure all the wires are connected correctly and in the right spots.

The LED stays on all the time:

1. Make sure the wires are not accidentally touching each other or soldered together incorrectly.

The LED turns on when the test button is pushed, but not when the assistive switch is activated:

1. Check to ensure the assistive switch is plugged into the jack correctly/all the way.
2. The assistive switch may not be assembled correctly/not working.

Replacing Batteries

Replacing the Batteries

1. Loosen the 3.5 mm jack nut without removing it and pull apart the two halves of the enclosure, exposing the electronics inside.
2. Remove the old batteries and dispose of them appropriately (recycle or recharge).
3. Insert the two new AAA batteries. Ensure they are installed in the correct orientation.
4. Check the tester by pressing the "BATTERY TEST" button to see if the indicator light illuminates.
5. Re-assemble the enclosure. Snap the two halves back together and tighten the nut on the 3.5 mm jack.
